

Department of Housing and Urban Development GIS Tool for Community Providers - Overview

Data Overview and Guidelines for use

Disclaimer: The datasets presented in HUD's GIS tool originate from a variety of sources and scales, and therefore will have different levels of measurement accuracy. The data are provided for informational purposes only and should not be considered suitable for high-precision measurements, calculations or quantitative analysis, or any other mission critical uses that might require highly accurate measurements of the earth's surface. Users who identify a need for such uses should consult a GIS professional to create accurate analyses specific to the user's needs.

Some of the data provided for use by here is governed by ESRI's licensing agreement for Standard (Free) Service Collections. The web-based data may be used and reproduced for **educational and non-commercial purposes only**. It is the user's responsibility to understand and comply with all ESRI licensing requirements, which can be found at:

[ESRI Standard Service Collection Licensing](#)

Introduction

The HUD web tool makes available a variety of 'live' GIS data to communities through the use of ESRI's free GIS data viewer, ArcReader. Users should [download the ArcReader application from ESRI's website](#) and follow the instructions in the quick start guide to install the ArcReader application and set up the HUD project data for the state(s) of their choice.

Data contained in the HUD GIS tool for ArcReader is of two types, statewide datasets stored on the user's local machine (these are contained in the project data file that you downloaded from the HUDHRE.info website), and two online datasets that provide aerial imagery and background street maps (these require an internet connection).

Software Guide

ESRI's ArcReader is an intuitive software tool for interacting with HUD's GIS Data for Community Providers. Users can learn a great deal about how to operate the ArcMap software by simply experimenting with the map. **Users cannot damage or alter map data in any way from within the ArcReader application.**

This document points out some of the basic functions that will be of interest to community providers, however the ArcReader application has many capabilities and functions that are beyond the scope of this document. ESRI provides

comprehensive documentation and tutorial data for users to familiarize themselves with ArcReader. Users should visit the ESRI support website for answers to any specific questions on how to operate the ArcReader software:

[ESRI ArcReader Documentation: ArcReader Overview](#)

First time users will find the following sub-sections of the ArcReader Overview particularly useful for becoming familiar with the basic features of the ArcReader application needed to get started:

[ESRI ArcReader Documentation: Using the Table of Contents](#)

[ESRI ArcReader Documentation: Moving Around on the Map](#)

[ESRI ArcReader Documentation: Searching and Querying the Map](#)

Additionally, ESRI has sample projects and tutorials for the ArcReader application available for download, which are designed to lead the user through the use of the various capabilities of ArcReader:

[ESRI Tutorial Datasets for Download](#)

HUD Provided Datasets

The HUD provided datasets are always available to the user and consist of several statewide datasets. Each dataset has associated table data that can be explored using the ArcReader Identify tool (please see the ArcReader documentation and tutorial data discussed in the Software Guide section above). Some of the fields available in the table data for each dataset are internal data fields that will not be of interest to users. The appendix lists the table data contents for each dataset.

2007 Continuum of Care Boundaries – The 2007 CoC Boundary dataset depicts the boundaries of all CoCs in a given state, based on the geography specified for the Continuum in Exhibit 1 of the 2007 SuperNOFA application. Please see Appendix A for a list of associated fields and their definitions.

Census Place Data (2000) – The Census Place dataset depicts selected Census 2000 data for census place-level geography. The place-level data are the building blocks of HUD’s geocode system, the geography specified by continua in Exhibit 1 of the SuperNOFA application. The census Place-level geography data is perhaps the most complicated and detailed dataset in the HUD provided GIS data, and care must be taken to ensure that users understand how to interpret these data. Please see Appendix A for a list of associated fields and their definitions and Appendix B for a list of additional included census tables and their definitions.

Both Summary File 1 (Census Short Form count data - comprehensive counts taken during the 2000 Census) and Summary File 3 (Census Long Form data - statistically derived estimates from a subset of respondents answering questions from the Long Form during the 2000 Census) are included. Before using any of the census data

presented here, it is important to understand the basis and nature of the SF1 and SF3 census data in question, and that certain types of data treatments (summing, averaging, etc.,) will not be valid for all data presented. Please see the census SF1 and SF3 documentation included in the HUD data download for details.

County Boundaries – the County Boundaries dataset depicts generalized state-wide county boundaries for the state in question. The associated attribute (table data) for this dataset contains additional valuable county-level census data, please see Appendix A for a list of demographic fields and their definitions.

2008 HUD Geocode & Initial Pro-Rata Need – the HUD Geocode & Initial Pro Rata-Need dataset depicts the 2008 HUD geocode universe that CoCs can claim on their Exhibit 1 of the SuperNOFA application. The associated table data contains information on the 2008 HUD Initial Pro-Rata Need for each geocode. Please see appendix A for a list of associated fields and their definitions.

Web Based Datasets from the ESRI Standard Collection

Supplementary aerial imagery and road data are provided through an internet connection. In the event that the user's computer is not connected to the internet, or occasionally when the ESRI servers that provide the data connection are unavailable, the ArcReader software will pop up a dialog box indicating that the web based data services are temporarily unavailable. Users may dismiss the warning dialog and continue to use the HUD provided datasets as normal. When the internet connection is restored, users can simply click the RELOAD option under File->Reload to restore the web based supplementary data.

ESRI Streetmap – The streetmap dataset provides generalized road data and names to the user. This dataset is only visible at scales of 1:250,000 or larger.

ESRI Imagery – The imagery data is composed of satellite and aerial photography that provides additional context for identifying points of interest. This dataset is 40% transparent to allow users to see additional data layered 'underneath' and is only visible at scales of 1:50,000 or larger.

Appendix A. List of GIS Datasets, associated table fields & definitions.

LAYER NAME	FIELD	DESCRIPTION
<u>2007 Continuum of Care Boundary</u>	OBJECTID	Internal (Software) ID
	Shape	Internal (Software) ID
	COC_NUM	The 2007 HUD designated CoC code for the selected feature.
	ST	State Abbreviation
	STATE	State Name
	COC_NAME	The 2007 CoC name for the selected feature.
	STATUS	A simplified status field for 2007; C-competitively funded, U-non-competitively funded, N-not funded
	Area_SQMI	The area of the selected feature in square miles.
	Shape_Length	The perimeter of the selected feature in meters.
	Shape_Area	The area of the selected feature in square meters.
<u>Census Place Data (2000)</u>	OBJECTID	Internal (Software) ID
	Shape	Internal (Software) ID
	SUM070	Census ID code. See census documentation for complete explanation.
	STATE	The two-digit state identifier for the selected feature. See census documentation for complete explanation.
	STUSAB	State Abbreviation
	COUNTY	The five-digit county identifier for the selected feature. See census documentation for complete explanation.
	CNTY_NAME	The county name.
	COSUB	The ten-digit county subdivision identifier for the selected feature. See census documentation for complete explanation.
	COSUB_NAME	The county subdivision name.
	COSUBPL	The fifteen-digit place identifier for the selected feature. See census documentation for complete explanation.
	COSUBPLNAM	The place name for the selected feature.
	KEY	The corresponding HUD geocode for the selected feature.
	ST	State Abbreviation
	HPL	Internal (HUD) ID
	TY	Internal (HUD) ID
	STA	Internal (HUD) ID
	NAME	Internal (HUD) ID
	CO	Internal (HUD) ID
	MCD	Internal (HUD) ID
	PLACE	Internal (HUD) ID

<u>Census Place Data (2000)</u>	FIPSKEY Area_SQMI Shape_Length Shape_Area	Internal (HUD) ID The area of the selected feature in square miles. The perimeter of the selected feature in meters. The area of the selected feature in square meters.
